(Charger)

(Base unit)

SPECIFICATIONS

■ SPECIFICATIONS

General

Modulation:	FM, 3 kHz Deviation	Redial:	Last dialed number each time the Redial button is pressed
Frequency Stability:	±2.5 kHz	Memory Capacity:	10 telephone numbers, up to 16 digits per station
Dial Type:	Tone (DTMF)/Pulse		
Pause:	3.5 seconds per pause		

	Base Unit	Portable Unit	Charger
Power Source: (Receiver Section)	AC adaptor KX-TCA1BX (DC 9 V)	Built-in rechargeable Ni-Cd battery	AC adaptor KX-TCA1BX (DC 9 V)
Receiving Frequency:	10 channels within 49.67 to 49.99 MHz	10 channels within 43.72 to 42.20 MHz	
Adjacent Channel Rejection:	40 dB	40 dB	
Sensitivity: (Transmitter Section)	1 µV for 20 dB S/N	2 µV for 20 dB S/N	
Transmitting Frequency:	10 channels within 43.72 to 44.20 MHz	10 channels within 49.67 to 49.99 MHz	
Jacks:	DC IN, Telephone line		DC IN
Antenna:	Telescopic	Telescopic	
Speaker:	57mm PM dynamic	3 cm dynamic	
Microphone:	Condenser microphone	Condenser microphone	
Dimensions (H × W × D):	3 ⁹ / ₃₂ " × 6 ²¹ / ₃₂ " × 8 ⁹ / ₁₆ " (79 × 169 × 222 mm) with handset	8 ⁷ / ₁₆ " × 2 ⁹ / ₁₆ " × 1 ¹⁵ / ₃₂ " (225 × 56 × 37 mm)	2 ³ / ₄ " × 3 ⁷ / ₃₂ " × 3 ¹¹ / ₃₂ " (70 × 82 × 85 mm)
Weight:	1.65lbs. (750g) with handset	0.44lbs. (200g) with battery	0.20lbs. (90g)

WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

When you mention the serial number, write down all 11 digits. The serial number may be found on the label affixed to the bottom of the unit.

FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.

When repairing, the following precautions will help prevent recurring malfunctions.

1. Cover plastic parts boxes with aluminum foil.
2. Ground the soldering irons.
3. Use a conductive mat on worktable.
4. Do not grasp IC or LSI pins with bare fingers.

Panasonic

1. LOCATION OF CONTROLS

1.1. Base Unit

1.2. Portable Unit

1.3. Charger

1.4. Display

1.4.1. Base Unit Display

The clock needs adjusting.

The base unit is in the clock setting mode.

In the standby mode, the display shows the current time.
(Ex. The current time is 11:45AM.)

The alarm clock is turned on.

During a conversation, the display shows the length of the call.
(Ex. 1 hour, 15 minutes and 30 seconds.)

The dial lock mode is set.

The base unit ringer volume is off.

When the restricted number (0 or 00) is dialed, it is displayed.

The base unit is in the programming mode of one-touch dialer and speed dialer.

While the portable unit is engaged in an outside call, it is displayed.

1.4.2. Portable Unit Display

The battery needs to be charged. Place the portable unit on the charger to charge the battery.

During a conversation, the display shows the length of the call (Ex. 1 hour, 6 minutes and 35 seconds). The battery strength is also displayed.

This display will be shown when:
—the portable unit has lost communication with the base unit. Move closer to the base unit, or
—another portable unit is in use.

While programming, the portable unit lost communication with the base unit. Move closer to the base unit.

This display will be shown when:
—the directory list is empty, or
—there are no stored items in the dialing button you pressed in the directory.

When trying to store an item in the directory, the directory memory is full.

This is a name from the directory. The stored name and phone number are displayed.

The length of the intercom call between the portable unit and base unit is displayed (Ex. 2 minutes 5 seconds).

TALK was pressed while the base unit was in use.

2. STANDARD BATTERY LIFE

After your Panasonic battery is fully charged;

While in use (TALK)	Up to about 6 hours
While not in use (Stand-by)	Up to about 20 days

- Battery life may be shortened depending on usage conditions, such as viewing the Caller ID Caller List or directory items and

ambient temperature.

- Clean the charge contacts of the portable unit and the charger with a soft, dry cloth. Clean if the unit is subject to grease, dust or high humidity. Otherwise the battery may not charge properly.
- If the battery is fully charged, you do not have to place the portable unit on the charger until "Recharge battery" is displayed and/or "  " flashes. This will maximize the battery life.
- The battery cannot be overcharged.

Portable unit standby mode

(The portable unit is off the charger.)

The portable unit goes into the standby mode after you finish using the portable unit (making/ answering a call, viewing the Caller List or directory items etc.). The display is blank, but the portable unit can receive calls. The battery life is conserved in this mode.

2.1. Battery Charge

Place the portable unit on the charger and charge for about 10 hours before initial use.

- Make sure that the confirmation tone sounds when the portable unit is placed on the charger.
- The CHARGE indicator lights.
- The portable unit number is displayed.

Battery Strength

You can check the preset battery strength on the display. The battery strength is as shown in the chart below.

Display prompt	Battery strength
	Fully charged
	Medium
	Low
 (flashing)	Needs to be recharged.

3. SETTINGS

3.1. Connections

Charger

- **USE ONLY WITH Panasonic AC ADAPTOR KX-TCA1BX.**
- **The AC adaptor must remain connected at all times. (It is normal for the adaptor to feel warm during use.)**

Base Unit

- **USE ONLY WITH Panasonic AC ADAPTOR KX-TCA1BX.**
- **The AC adaptor must remain connected at all times. (It is normal for the adaptor to feel warm during use.)**
- **Use only a Panasonic Handset for the KX-TC1075BXB.**
- **During a power failure, this unit functions only as a regular telephone.**
- **When more than one unit is used, the units may interfere with each other. To prevent or reduce interference, please leave ample space between the base units.**

3.1.1. Selecting the Dialing Mode (Portable Unit)

You can program the dialing mode **using the portable unit near the base unit**. If you have touch tone service, set to “Tone”. If rotary or pulse service is used, set to “Pulse”. Your phone comes from the factory set to “Tone”. **Make sure that the base unit and portable unit are in the standby mode.**

1 Press **FUNCTION**.

▶Save directory
Ringer volume
▲▼ ▶OK=Yes

2 Press ▼ or ▲ repeatedly until the arrow points to “Program”.

▶Program
▲▼ ▶OK=Yes

3 Press ▶ **OK** (Yes key).

▶Set flash time
Set dial mode
▲▼ ▶OK=Yes

4 Press ▼ or ▲ repeatedly until the arrow points to “Set dial mode”.

Set flash time
▶Set dial mode
▲▼ ▶OK=Yes

5 Press ▶ **OK** (Yes key).

Dial mode
:Tone
▲▼ ▶OK=Save

6 Press ▼ or ▲ to select “Pulse” or “Tone”. Press ▶ **OK** (Save key).

Dial mode
:Pulse

- A beep sounds.
- To return to the standby mode, press **EXIT/CH**.

- You can exit the programming mode any time by pressing **EXIT/CH**.
- If 3 beeps sound and the display shows “Save error”, move closer to the base unit and try again. If “Save error” is still displayed, place the portable unit on the charger. Start again from step 1.

3.1.2. FLASH Button (Portable Unit) (Base Unit)

Pressing **FLASH** allows you to use special features of your host PBX such as transferring an extension call or accessing special telephone services (optional) such as call waiting.

Selecting the flash time (Portable Unit)

The flash time depends on your telephone exchange or host PBX. You can select from flash times: "700, 600, 400, 300, 250, 110, 100 or 90 ms (milliseconds)" **using the portable unit near the base unit**. Your phone comes from the factory set to "700 ms".

Make sure that the base unit and portable unit are in the standby mode.

- 1 Press **FUNCTION** on the portable unit.
- 2 Press  or  repeatedly until the arrow points to "Program".
- 3 Press  **OK** (Yes key).
- 4 Press  or  repeatedly until the arrow points to "Set flash time".
- 5 Press  **OK** (Yes key).
- 6 Press  or  repeatedly until the desired time is displayed.
- 7 Press  **OK** (Save key).
 - A beep sounds.
 - To return to the standby mode, press **EXIT/CH**.

- You can exit the programming mode any time by pressing **EXIT/CH**.
- If 3 beeps sound and the display shows "Save error", move closer to the base unit and try again. If "Save error" is still displayed, place the portable unit on the charger. Start again from step 1.
- If you are connected via a PBX, a longer flash time may be necessary to use PBX functions (transferring a call etc.). Consult your PBX installer for the correct setting.

3.1.3. Dial Lock (Base Unit)

You can prevent the portable unit and base unit from making a call to any number except the one pre-programmed in the memory of one-touch auto dial buttons. Once you locked the dialing buttons, even emergency numbers cannot be dialed. Only incoming calls are accepted until the dial lock is canceled.

Before using this feature, we recommend storing emergency numbers in the memory of one-touch auto dial buttons. Even if the dialing buttons are locked, the numbers stored in these buttons can be dialed.

- If you choose not to program emergency numbers, but plan to use the dial lock, any numbers programmed into the One-Touch Dialer can be accessed.

Setting the dial lock

Make sure that the base unit and portable unit are in the standby mode.

- 1 Press **AUTO/PROGRAM**.
- 2 Press  or  repeatedly until "DialLock----" is displayed.
 - If you use "1111" as a password (factory set), there is no need to enter the password. Go to step 5.
- 3 Enter the password.
- 4 Press **AUTO/PROGRAM**.
 - If the wrong password is entered, 6 beeps will sound. Enter the correct password, then press **AUTO/PROGRAM**.
- 5 Press **1** to set the dial lock.
1: ON **2**: OFF
- 6 Press **AUTO/PROGRAM**.
 - "  " is displayed.
 - A beep sounds.

→

Ex. If the password is changed,
"----" is displayed.

DialLock----
→

DialLock■■■■
→

DialLock off
→

DialLock on
→

11:50AM
-O

You can use the following features while the dialing buttons are locked.

- Dialing a number you programmed into the memory of one-touch auto dial buttons.
- Storing names and numbers in the directory.
- Selecting the ringer volume.

canceling the ring tone timer.

- Answering the second call by pressing **FLASH**.

Canceling the dial lock

Follow steps 1 through 4. In step 5, press **2**.

- "🔒" on the display will disappear.

3.1.4. Call Restriction (Base Unit)

You can prevent the portable unit and base unit from dialing phone numbers beginning with "0" or "00" with the portable unit and base unit. Phone numbers with the restricted leading digits cannot be dialed out. Phone numbers stored in the One-Touch Dialing are not affected by the call restriction setting.

Before using this feature, we recommend storing emergency numbers in the memory of one-touch auto dial buttons. Even if the phone numbers buttons are restricted, the numbers stored in these buttons can be dialed.

- If you choose not to program emergency numbers, but plan to use the call restriction, any numbers programmed into the One-Touch Dialer can be accessed.

Setting the call restriction

Make sure that the base unit and portable unit are in the standby mode.

1 Press **AUTO/PROGRAM**.

2 Press or repeatedly until "Restrict----" is displayed.

Ex. If the password is changed, "----" is displayed.

- If you use "1111" as a password (factory set), there is no need to enter the password. Go to step 5.

3 Enter the password.

4 Press **AUTO/PROGRAM**.

- If the wrong password is entered, 6 beeps will sound. Enter the correct password, then press **AUTO/PROGRAM**.
- The current restricted number is displayed.

5 Each time you press **0**, the restricted no. ("0" or "00") will change.

- The selected number is displayed.

6 Press **AUTO/PROGRAM**.

- A beep sounds.

When dialing a phone number beginning with the restricted no., "Restricted" is displayed and not dialed out.

Canceling the call restriction

Follow steps 1 through 4. In step 5, press and **AUTO/PROGRAM**.

3.2. For Optional Multi-Portable Unit Users

You can register and operate up to 4 portable units at the base unit.

Important:

The functions of the optional portable unit are the same as the KX-TC1075BXB portable unit.

The optional portable unit model number is KX-TCA390BXB.

When using two or more portable units, the following operation's features will be different.

- Intercom between the portable unit and base unit
- Transferring outside calls

- All of the portable units ring when calls are received.
- When one of the portable units is in use or in the intercom mode, other portable units can not be used.
- An intercom between two portable units is not available.

3.2.1. Registering Optional Portable Units (Base Unit & Portable Unit)

Registration is necessary for portable units. You can register up to 4 portable units at the base unit. The model number of the optional portable unit is KX-TCA390BXB. The included portable unit is pre-registered at the factory and assigned the portable unit number 1.

A portable unit will be assigned the number at registration. Only one portable unit can be registered at a time.

You can not assign the same number to more than one portable unit. To confirm the portable unit number, place the portable unit on the charger.

Make sure that the portable unit and base unit are in the standby mode. Registration must be completed within 1 minute.

- 1 Base unit:**
Press **FUNCTION/PROGRAM** until 2 beeps sound.

→
- 2** Press *****.
• The IN USE indicator flashes.

Unit Assign

→
- 3 Portable unit:**
Press **FUNCTION**.

[Battery Icon]

▶Save directory
Ringer volume
▼▲ ▶OK=Yes
- 4** Press ▼ or ▲ repeatedly until the arrow points to "Program", then press ▶ **OK** (Yes key).

[Battery Icon]

▶Program
▼▲ ▶OK=Yes
- 5** Press ▼ or ▲ repeatedly until the arrow points to "Unit option", then press ▶ **OK** (Yes key).

[Battery Icon]

▶Unit option
▼▲ ▶OK=Yes
- 6** While "Assign" is at the arrow, press ▶ **OK** (Yes key).

[Battery Icon]

▶Assign
Erase
▼▲ ▶OK=Yes

- 7 Press  or  repeatedly until the desired portable unit number (1 to 4) is displayed.
(Ex. "2" is selected.)

- The selected number is displayed.
- The IN USE indicator on the base unit goes out.

- 8 Press  **OK** (Save key).

- A beep sounds on the base unit and portable unit.

- 9 Press **EXIT/CH** to return to the standby mode.

- The portable unit number (1 to 4) will be displayed on the portable unit.

- You can exit the programming mode any time by pressing **EXIT/CH**.
- If 3 beeps sound and the display shows "Save error", place the portable unit on the charger. Start again from step 1.
- When you want to change the portable unit number, erase the previous number. Then restart from step 1.

To erase the portable unit number

1. Press **FUNCTION** .
 2. Press  or  repeatedly until the arrow points to "Program", then press  **OK** (Yes key).
 3. Press  or  repeatedly until the arrow points to "Unit option", then press  **OK** (Yes key).
 4. Press  or  repeatedly until the arrow points to "Erase", then press  **OK** (Yes key).
 - The selected number is displayed.
 5. Press  **OK** (Yes key).
 - A beep sounds.
 - To return to the standby mode, press **EXIT/CH**.
- You can exit the programming mode any time by pressing **EXIT/CH**.

4. EXPLANATION OF ID CODE

4.1. General Information

The ID CODE for KX-TC1075BXB consists of 5-digit numbers between "00000"~"65535". They are stored into the base unit and the portable unit. The ID CODE is found in the label on the bottom of each cabinet of the base unit and the portable unit. As for a newly installed extension portable unit, the ID CODE of the base unit is written into the portable unit. Refer to registered the portable unit described in [3.2.1 Registering Optional Portable Units \(Base Unit & Portable Unit\)](#).

4.2. ID Writing (For service activity)

The explanation of the method of writing this ID is used to write ID besides ID of the set when the person in charge of service repairs the set.

<Writing Procedure>

1. Install the option diode DS13 to the base unit and turn the power ON.
 - The base unit enters the RX waiting mode at the special channel (As for the special channel, refer to [12 FREQUENCY TABLE \(MHz\)](#).)
2. Insert the battery into the portable unit while pressing the keys of 2,7 and # at the same time. "ID code write" is displayed on the LCD of the portable unit.
3. Press the TALK button of the portable unit. The portable unit and the base unit are linked at the special channel. (As for the special channel, refer to [12 FREQUENCY TABLE \(MHz\)](#))
4. Press the ID CODE of 5 digits using the decimal system from the portable unit according to ID of the ID label. ID = 00000~65535
5. Press the TALK button of the portable unit.
 - The portable unit transmits the ID writing request data.
 - When the base unit receives the data, a new ID is written in the EEPROM of the base, then it transmits "ID confirmation data" to the portable unit.
 - When the portable unit receives the data, the ID is written in the EEPROM of the portable unit, then the confirmation tone will sound.

Note: When ID writing is failed, the error sound will be output. At

the same time, RF block and EEPROM of the base unit and the portable unit should be checked.

6. Turn OFF the power of the base unit, and then remove the option diode DS13.
7. Turn ON the power of the base unit then confirm the LINK.

5. DISASSEMBLY INSTRUCTIONS

Fig.4

Fig.5

Fig.6

Ref. No.	Procedure	Shown in Fig.	To remove-	Remove-
		-		
1	1	1	Lower Cabinet	Screws (2.6×14).....(A)×5
2	1, 2	2	Main P.C. Board	Remove the solders Remove the Main P.C.Board
3	1, 2, 3	3	Operation P.C. Board	Screws (2.6×8).....(B)×7 Remove the Operation P.C.Board
4	4	4	Rear Cabinet	Remove the battery compartment cover
5	4, 5	5		Screws (2.6×12).....(C)×2
6	4, 5, 6	6	Main P.C. Board	Screws (2.6×12).....(D)×2 Remove the solders
	4, 5, 6,			Screws (2.6×10).....(E)×2 Remove the Main P.C.Board

Note: Press ① and ② firmly to open the cabinet.

6. ASSEMBLY INSTRUCTION

①

1 RELEASE THE LOCK OF THE CONNECTOR.

2 INSERT THE EDGE OF FPC (Flexible Print Circuit) DEEPLY INTO THE CONNECTOR.

3 PUSH HATCHED PARTS SIMULTANEOUSLY

② HOOKS OF LCD HOLDER SHOULD BE FIXED FIRMLY ON P.C.B.

INSERT GUIDE RIB FOR LCD HOLDER CORRECTLY INTO P.C.B. SLIT.

③ INSERT GUIDE RIB FOR LCD HOLDER CORRECTLY INTO P.C.B. HOLE.

④ HOOKS OF RF HOLDER SHOULD BE FIXED FIRMLY ON P.C.B.

7. HOW TO REPLACE FLAT PACKAGE IC

7.1. Preparation

- SOLDER / Sparkle Solder 115A-1, 115B-1 or Almit Solder KR-19, KR-19RMA
- Soldering iron / Recommended power consumption will be between 30 W to 40 W. / Temperature of Copper Rod 662 \pm 50°F (350 \pm 10°C) / (An expert may handle between 60 ~ 80 W iron, but beginner might damage foil by overheating.)
- Flux / HI115 Specific gravity 0.863 / (Original flux will be replaced daily.)

7.2. Procedure

1. Temporary fix FLAT PACKAGE IC by soldering on two marked 2 pins.

● - - - - - Temporary soldering point.

Most important matter is accurate setting of IC to the corresponding soldering foil.

2. Apply flux for all pins of FLAT PACKAGE IC.

○ - - - - - Flux

3. Solder employing specified solder to direction of arrow, as sliding the soldering iron.

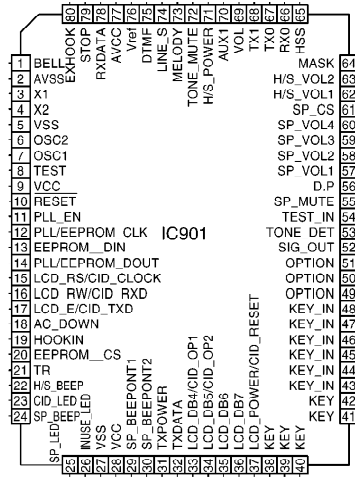

7.3. Modification Procedure of Bridge

1. Re-solder slightly on bridged portion.
2. Remove remained solder along pins employing soldering iron as shown in below figure.

8. CPU DATA (BASE UNIT)

11. EXPLANATION OF CPU DATA COMMUNICATION

11.1. STAND-BY → TALK, TALK → STAND-BY

Press the TALK button

- ① The portable unit transmits TALK_ACK at the control channel.
- ② Then base unit transmits ACK_OK including the vacant TALK channel.
- ③ The portable unit transmits TALK_CMD, then moves to the vacant TALK channel.
- ④ The base unit moves to the TALK channel on receiving TALK_CMD.
Press the TALK button.
- ⑤ The portable unit transmits STNDBY_CMD at the TALK channel.
- ⑥ The base unit transmits CONDITION at the TALK channel, then moves to the control channel when the transmission has been completed.
- ⑦ The portable unit moves to the control channel after receiving CONDITION.

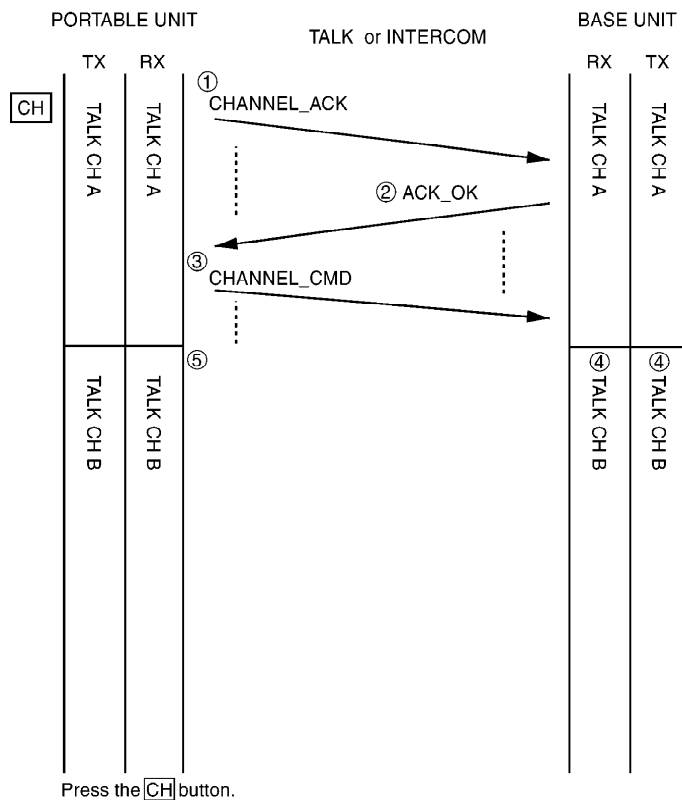

Note: The control channel is determined according to the ID code. (Control channel = The remainder when the ID is divided by 10)

11.2. Ringing

- ① When the bell signal is input, the base unit transmits BELL at the control channel.
 ② The portable unit rings the bell on receiving BELL.

11.3. Changing the channel

- ① The portable unit transmits CHANNEL_ACK at the TALK channel A.
- ② The base unit replies with ACK_OK including "vacant channel number B" at the TALK channel A.
Note: The "vacant channel number B" is selected at random by the base unit.
- ③ Then portable unit transmits CHANNEL_CMD at the TALK channel A.
- ④ The base unit moves to the TALK channel B after receiving CHANNEL_CMD on channel A.
- ⑤ The portable unit moves to the TALK channel B when the transmission of CHANNEL_CMD has been completed.

11.4. Ports for transmitting and receiving of data

Portable Unit: / transmitting (TX) ... 33 Pin / receiving (RX) ... 27 Pin

Base Unit: / transmitting (TX)... 21 Pin / receiving (RX) ... 22 Pin

11.5. Waveform of DATA Used for Cordless Transmission and Reception

The DATA which is transmitted from the Handset to the Base Unit is combination of DATA 0, DATA 1, DATA Delimiter.

The DATA which is transmitted from the Base Unit to the Handset is combination of DATA 0, DATA 1, DATA Delimiter.

11.5.1. Handset

13. TEST MODE

13.1. BASE UNIT

13.1.1. Test Mode Flow Chart (Base Unit)

from any mode except for Key check mode and TALK mode

13.1.2. Initial Condition in Test Mode

Channel	10CH
SP-Phone Vol.	Max
InterCOM Vol.	Max
Ringer Vol.	High
Dial Mode	PULSE(For pulse dial test)
Others	Factory-Release Initial Set-Up

13.1.3. TEST MODE Function Check List

No.	Objectives	Operation and Unit action	Remarks
1	Status change	Refer to 13.1.1 Test Mode Flow Chart (Base Unit) . / (Push locator or push SP-Phone)	
2	Channel change	To push UP button → Channel +1 / To push DOWN button → Channel -1	To operate in T/ INTERCOM/STB only. / TX/RX data transmission is available.
3	KEY SW/LED operation	When pushing any Key except for LOCATOR button in KEY CHECK Status, -Confirmation tone sounds. -All LED are ON while pushing Key.	
4	DTMF signal check	On SP-Phone status, push the Dial button (12keys). / The DTMF signal corresponded to Dial button that is pressed will be sent to the line.	
5	SP-Phone function check	ON SP-Phone status, Microphone signal will be muted while "PROGRAM" button is pressed.	
6	Electromagnetic field Strength check	In Use LED indicates the status of Electricfield detector circuit in the mode of TALK or INTERCOM. / Weak E. field : In Use LED - OFF / Strong E. field : In Use LED - ON	Setting of SIG-C terminal / STAN (Carrier Sense) ND (normal)
7	Other notices	The main difference of unit operation on Test Mode is described below, compare with normal operation. -Empty Channel Scan is not available. / (fixed channel TX/RX) -Weak Electric field detection is not available in TALK mode. -Unlock detection of Phase-lock loop is not available. -The judgment of ID code included of Receiving RF signal is not available.	To enable to inv and confirm the transmitter/ Rec circuit easily.

13.2. Portable Unit

13.2.1. Test mode Set Up Procedure

—Procedure 1 (In case of Unit operation)— / (Released Ni-Cd Battery status)

1. With pressing [1], [9], [*] buttons at the same time, plug in Ni-Cd Battery.

2. After release the buttons, Unit starts to work in test mode.

- Confirmation tone sounds.
- LCD lights all prompt.

STATUS : Key test mode

—Procedure 2 (In case of Unit operation)— / (Apply power to the portable unit)

1. Press [TALK] key.

2. Press [5], [8], [0] keys at the same time,

3. You should hear the portable unit beep. Release the 3 keys.

If you do not hear a beep, remove the power from the portable unit and repeat from “1. Press [TALK] key”.

- LCD lights all prompt.

STATUS : Key test mode

—Procedure 3 (In case of PCB operation)— / (Power OFF status)

1. Solder the Resister (R930 0 Ω : Option)—Refer to [38.2 Flow Solder Side View](#).

2. Plug in Power.

3. Confirmation tone sounds.

- LCD lights all prompt.

STATUS : Key test mode

note:

It is possible to operate in the condition of Option Resister equipped.

It is impossible to enter into TEST MODE when Option Resister is equipped after plug in Power.

13.2.2. Initial Condition in Test Mode

Channel	10CH
Receive Vol.	MEDIUM
Ringer Vol.	High
Dial Mode	TONE(For DATA Modulation Confirmation)
Others	Factory-Released Initial Set-Up

13.2.3. TEST MODE Function Check List

No.	Objectives	Operation and Unit action	Remarks
1	Status change	TALK/STNDBY mode change every time push talk key.	
2	Channel change	To push [EXIT/CH] button → Channel +1 / To push [FLASH] button → Channel -1	To operate in T/STNDBY mode (TX/RX data tran is not available.
3	Check key Check LCD Check backlight LED	When pushing any Key except for TALK button in STNDBY mode -Confirmation pi sounds. -All LCD are ON. -Backlight LED of LCD and Key are ON.	
4	SIG-OUT terminal	In TALK mode, the output of the SIG-OUT terminal is switched pushing the dial button. -0:Normal output -1:Noise detect (Normal) -2:Noise detect (Carrier Sense) -3:Battery Low ← Default -4:PLL lock The logic of the SIG-OUT terminal is displayed by the antenna pict (For the monitor from the outside) -0:Normal display (Battery Low) -1:SIG-OUT display / SIG-OUT = "Hi" → Antenna picture OFF / SIG-OUT = "Lo" → Antenna picture ON However, if the above-mentioned dial button is not pushed, SIG-OUT terminal is not output to Antenna picture.	
5	Electro-magnetic filed Strength check	When pushing [1] key in TALK mode, Antenna picture display the condition of Electric field detected circuit. / Weak Electric field : Antenna picture OFF / Strong Electric field : Antenna picture ON	
6	Ringer level	In STANDBY mode, push NAVIGATOR  ,  key. -Portable unit is ringing while pushing the NAVIGATOR key.  =HIGH /  =LOW	
7	Other notices	The main difference of the unit's operation in the test mode is as follows compared with a normal mode. -Empty Channel Scan is available. (fixed channel TX/RX) -Unlock detection of Phase-lock loop is not available. -The judgement of ID code included of Receiving RF signal is not available.	

14. ADJUSTMENTS (BASE UNIT)

If your unit have below symptoms, adjust each item using remedy column from the table.

Symptom	Remedy
The base unit dose not respond to a call from the portable unit.	Make adjustments i
The base unit dose not transmit or the transmit frequency is off.	Make adjustments i
The transmit frequency is off.	Make confirmation (C)
The transmit power output is low, and the operating distance between base unit and the portable unit is less than normal.	Make confirmation (D)
The reception sensitivity of base unit is low with noise.	Make confirmation (E)
The transmit level is large or small.	Make confirmation
The reception level is large or small.	Make adjustments i
The unit does not link.	Make confirmation (H)

Base unit is set to test mode then press "LOCATOR" key twice.

When replacing these parts, adjust as shown in table below table.

Replace Parts	Adjustment items	Test Mode	Adjustment Point	Procedure
IC801, T801 C841	(A) RX VCO Adjustment	CH10 Talk	T801	1. Set S11 to ON. 2. Adjust T801 so that the reading of the Digital Voltmeter is $1.5\text{ V} \pm 0.1\text{ V}$.
IC802, D851 T851	(B) TX VCO Adjustment	CH10 Talk	T851	1. Set S3, S11 ON. 2. Adjust T851 so that the reading of the Digital Voltmeter is $1.7\text{ V} \pm 0.1\text{ V}$.
DUP802, X801 C835, C836	(C) TX Frequency Confirmation	CH10 Talk	—	1. Set S4 to ON. 2. Confirm so that the reading of the frequency counter is $44.200\text{ MHz} \pm 0.7\text{ kHz}$.
R864, IC802 R862, C861	(D) TX Power Confirmation	CH10 Talk	—	1. Set S8 to ON. 2. Confirm that TX Power is more than +10 dBm.
DUP801 CF801 CF802	(E) RX Sensitivity Confirmation (2nd IF output)	CH10 Talk	—	1. Set S6, S7 to ON. 2. Apply a 60dB μ Vemf output from S.S.G. (modulation frequency 1 kHz, dev. 0 kHz). 3. Confirm that the reading of the RF VTVM is maximum output (more than 30 mV).
IC801	(F) Line Output Level Confirmation	CH10 Talk	—	1. Set S6, S5 to ON. 2. Apply a 40dB μ Vemf output from S.S.G. (modulation frequency 1kHz, dev. 3kHz). 3. Adjust VR402 so that the reading of the AF VTVM is $-11\text{ dBm} \pm 3.0\text{ dBm}$ (600load).
IC801 D851	(G) Line Input Modulation Adjustment	CH10 Talk	VR701	1. Set S6, S9 and S10 to ON. 2. Input via loop simulator 1.0 kHz, -25.0 dBm (measured at T-R) signal. 3. Apply a 40 dB μ Vemf output from S.S.G. (modulation frequency 1 kHz, dev. 0 kHz). 4. Adjust VR401 so that the reading of the FM Deviation Meter is $3.1\text{ kHz} \pm 0.2\text{ kHz}$.
IC801 DUP801	(H) Noise Squelch Confirmation	CH10 Talk	—	1. Set S6, to ON. 2. Measure the SSG output level when the noise squelch changes LOW to HIGH. 3. The SSG output level is -3~+12 db μ Vemf.

The connection of adjustment equipments are as shown in [30.2 Flow Solder Side View](#), [36.2 Flow Solder Side View](#).

15. ADJUSTMENTS (PORTABLE UNIT)

If your unit have below symptoms, adjust each item using remedy column from the table.

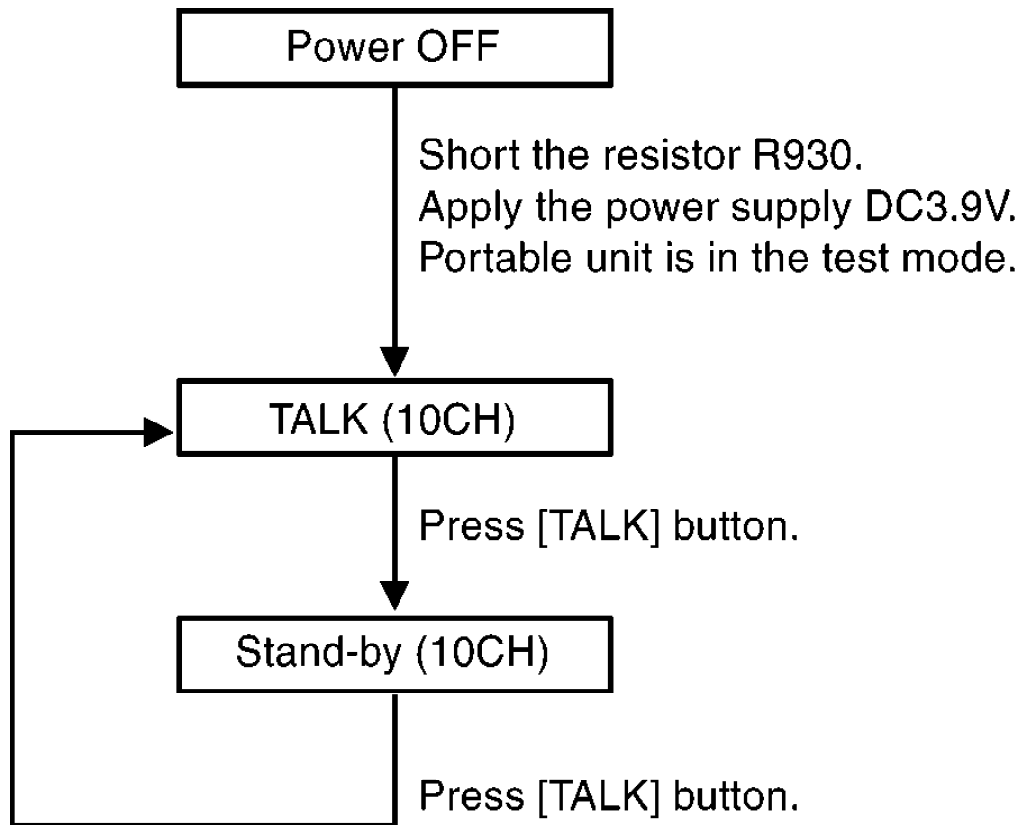

Symptom	Remedy
The movement of Battery Low Indicator is wrong.	Make confirmation in item (A)
The base unit does not respond to a call from handset.	Make adjustment in item (B)
The base unit does not transmit or the transmit frequency is off.	Make adjustment in item (C)
The transmit frequency is off.	Make confirmation in item (D)
The transmit power output is low, and the operating distance between base unit and handset is less than normal.	Make confirmation in item (E)
The reception sensitivity of base unit is low with noise.	Make confirmation in item (F)
Does not link between base unit and handset.	Make confirmation in item (G)
The reception level is high or low.	Make confirmation in item (H)
The transmit level is high or low.	Make adjustment in item (I)

Unit condition:

1. Remove the antenna lead wire from P.C Board of Portable Unit.
2. Power Supply: DC 3.9V
3. Volume: HIGH (When P.C. Board of the portable unit is in test mode, volume condition is medium.Press Navigator key  once.)
4. Speaker Load: 150 Ω

CH	TX Frequency	RX Frequency
CH10	49.970MHz	44.200MHz

15.1. Test Mode Flow Chart (Portable unit)

15.2. How to set the test mode

CH10 Test Mode

1. Before setting portable unit to test mode, charge portable unit with battery on the base set.
2. After connecting the resistor R930 and apply a power supply DC 3.9 V.
(The unit becomes CH10 Talk)
3. Press **[TALK]** button.
(The unit becomes CH10 standby)
4. Press **[TALK]** button.
5. Press **[EXIT/CH]** button.
6. Press the **[FLASH]** button.

CH10 → CH1 → CH2.....CH9

CH10 → CH9 → → CH1

* Refer to **38 CIRCUIT BOARD AND WIRING CONNECTION DIAGRAM (PORTABLE UNIT)**. / R930 :
0 Ω resistor

15.3. Adjustment

When replacing these parts, adjust as shown in table below.

Replace Parts	Adjustment items	Test Mode	Adjustment Point	Procedure
IC101	(A) Battery Low Confirmation	CH10 Talk	—	1.Set S1, S10 to ON. 2.Set the power supply voltage to DC 3.65 V, and confirm so that the reading of oscilloscope is High. 3. Set the power voltage to DC 3.45 V, and confirm so that the reading of oscilloscope is Low.
IC101, X101, T301, VD301	(B) TX VCO Voltage Adjustment	CH10 Talk	T301	1. Set S2 to TX VCO side. 2. Adjust T301 so that the reading of digital voltmeter is 1.5 V \pm 0.1 V (After adjusting, set S2 to OFF).
IC101, X101, T201	(C) RX VCO Voltage Adjustment	CH10 Talk	T201	1. Set S2 to RX VCO side. 2. Adjust L5 so that the reading of digital voltmeter is 1.2 V \pm 0.1 V (After adjusting, set S2 to OFF).
X101, IC101 C141, C142	(D) TX frequency Confirmation	CH10 Talk	—	1.Set S3 to ON. 2.Confirm that the reading of frequency counter is 49.970 MHz \pm 700 Hz .
DUP301 IC301	(E) TX Power Confirmation	CH10 Talk	—	1. Set S4 to ON (S3:OFF). 2. Output level should be over 9dBm on RF VTVM (50 Ω).
DUP101 IC101 CF1 CF2	(F)RX Confirmation (2nd IF Output)	CH10 Talk	—	1.Set S7, S8 to ON. 2. Apply a 60dB μ Vemf output from S.S.G. (modulation frequency 1kHz, dev. 0kHz) 3.Confirm 2nd IF output so that its reading of RF VTVM is more than 15mV.
DUP101 IC101	(G) Noise Squelch Confirmation	CH10 Talk		1. Set S1, S8 on. 2. Press "1" key to set Noise Squelch Mode. 3. Apply a -3dB μ Vemf output from S.S.G. (modulation frequency 1.0kHz, dev. 3kHz). 4. Oscilloscope become High. 5. Apply a +12dB μ Vemf output from S.S.G. (modulation frequency 1.0kHz, dev. 3kHz). 6. Oscilloscope become Low.
IC101	(H) Speaker Output Level Confirmation	CH10 Talk	—	1.Set S5, S7 to ON. 2. Apply a 40 dB μ Vemf output from S.S.G.(modulation frequency 1kHz, dev. 3kHz). 3.Confirm that SP output level is -11 \pm 5dBm. (distortion: less than 6%) (volume: MAX)
IC301 VD301	(I) MIC Modulation Factor Adjustment	CH10 Talk	VR901	1.Set S7, S9, S11 to ON. 2.Apply a MIC signal (1kHz, -40 dBm at 600 Ω). 3.Confirm that the reading of FM Deviation Meter is 3.6kHz \pm 0.7kHz.
	(J) Data Moudulation Confirmation	CH10 TALK	—	1.Set S11 to ON. 2.Keep pressing the "1" button. 3.Confirm for a 4.0~8.5 kHz FM Deviation Meter reading.

The connections of adjustment equipments are as shown in **38.1 Component View**, **38.2 Flow Solder Side View**.

16. RF SPECIFICATION

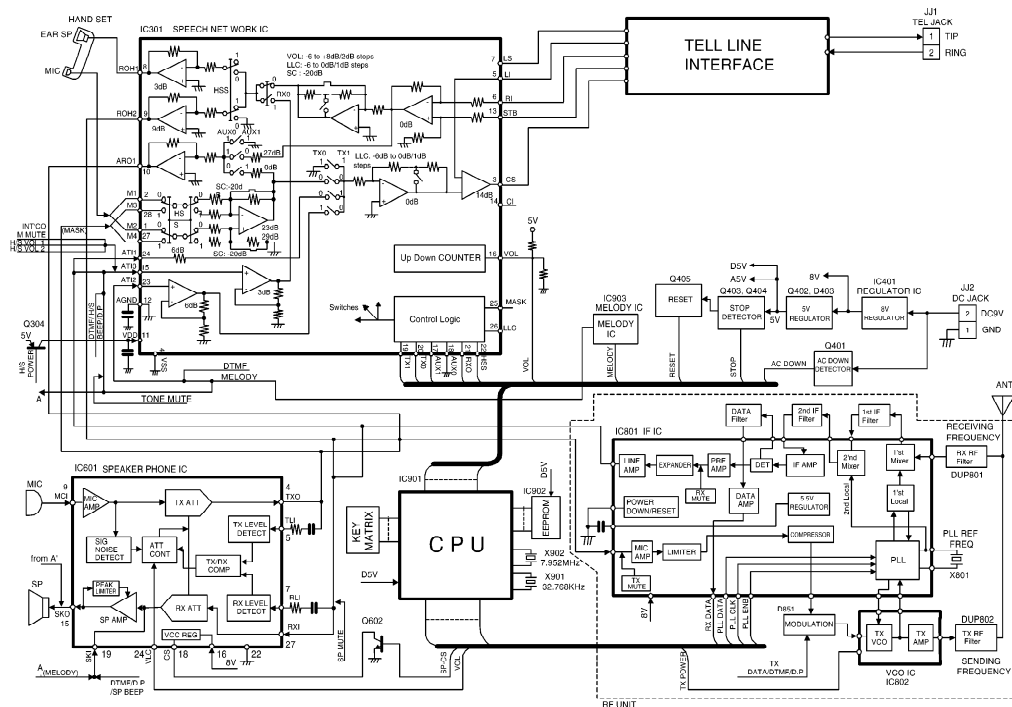

16.1. Base Unit

Item	Value	Refer to -.	Remarks
Receiving Sensitivity	Less than +12 dB μ Vemf	-	
Noise Squelch	-3 ~ +12 dB μ Vemf	14 ADJUSTMENTS (BASE UNIT) (H)	
TX Frequency	44.200 MHz \pm 700 Hz	14 ADJUSTMENTS (BASE UNIT) (C)	at CH10
TX Power	more than +10 dBm (CH10)	14 ADJUSTMENTS (BASE UNIT) (D)	at CH10
Line Modulation factor	2.9 kHz ~ 3.3 kHz	14 ADJUSTMENTS (BASE UNIT) (G)	at CH10
Line Modulation Distortion	Less than 7%	-	at CH10
Line Modulation factor (Max.)	4.5 kHz ~ 8.5 kHz	-	at CH10
Data Modulation factor	4.0 kHz ~8.0 kHz	-	at CH10

16.2. Portable Unit

Item	Value	Refer to -.	Remarks
Receiving Sensitivity	Less than 12 dB μ Vemf	-	at CH10
Noise Squelch	49.970 MHz \pm 700 Hz -3 ~ +12 dB μ Vemf	15 ADJUSTMENTS (PORTABLE UNIT) (G)	Low \rightarrow High a
TX Frequency	49.970MHz \pm 700 Hz	15 ADJUSTMENTS (PORTABLE UNIT) (D)	at CH10
TX Power	more than +9 dBm	15 ADJUSTMENTS (PORTABLE UNIT) (E)	at CH10 (Antenna soldering point Load)
Data Modulation factor	4.0 kHz/dev ~ 8.0 kHz/dev	15 ADJUSTMENTS (PORTABLE UNIT) (J)	at CH10
MIC Modulation factor	3.1 kHz/dev ~ 4.3 kHz/dev	15 ADJUSTMENTS (PORTABLE UNIT) (I)	at CH10 (Mic to 40dBm Input)

17. BLOCK DIAGRAM (BASE UNIT)

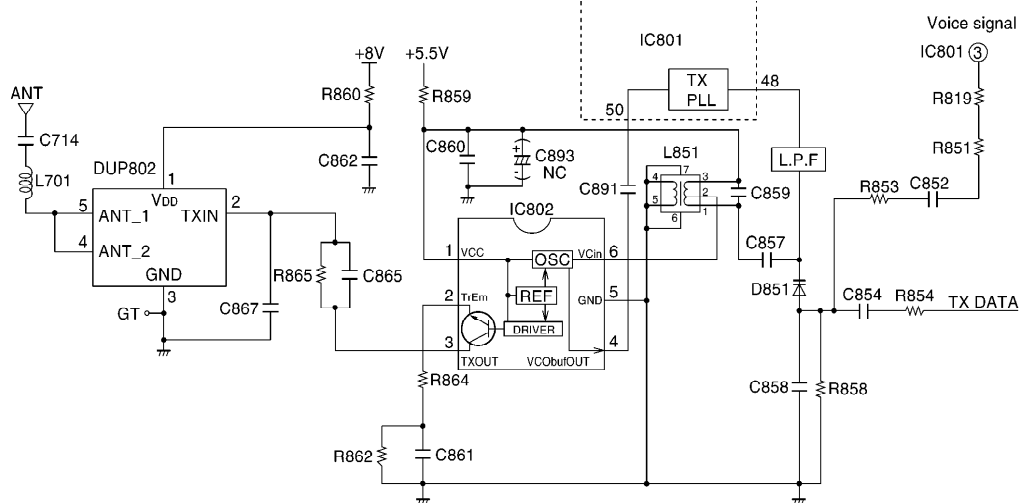

18. CIRCUIT OPERATION (BASE UNIT)

18.1. Transmitter Circuit

The voice signal or the data signal sent to the handset is applied in the anode of the variable capacitor diode (VARICAP) D851. The capacitance of VARICAP is changing in accordance with the Voice signal or TX DATA signal. Therefore, the carrier frequency which is generated by IC802 and L851 will be changing, and Frequency modulated RF signal is generated. Then, amplified by IC802 - Amplifier part, pass through the duplexer, and radiated from Antenna.

<Fig 101>

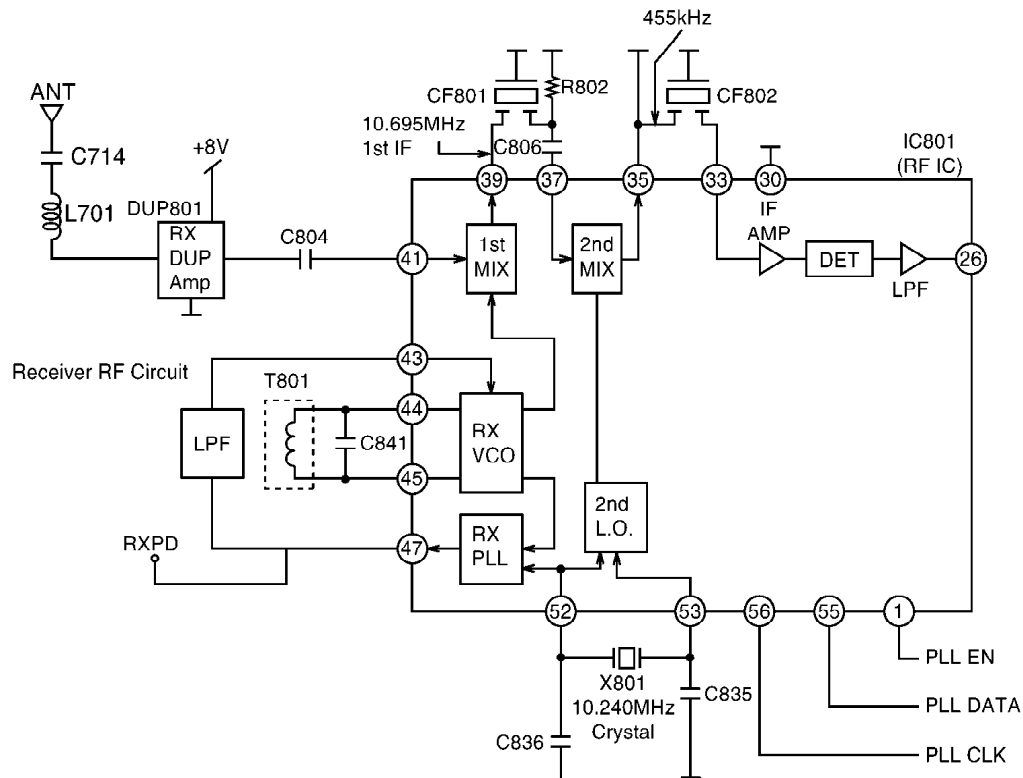

18.2. Receiver RF IF Circuit

18.2.1. Circuit Operation:

The signal of 49MHz band (49.670Å49.99MHz) which is input from ANT is filtered at DUP801, then it is input to Pin 41 of IC801. 1st local frequency is decided by the serial data which is output from Pin 11, 12 and 14 of IC901 and controlled by phase lock-loop system (PLL). PLL system is constructed by RX VCO (T801), RX PLL and LPF. RX VCO which oscillates at T801 and Pins 44, 45 of IC801 is input to programmable controller at inside of IC801. The input signal, Pin 41 of IC801 and 1st local frequency output from RX VCO are mixed at inside of IC801. The phase-detector signal that indicates the difference between the current oscillation frequency and the desired one is feed backed to the voltage controlled oscillator. Then the frequency difference is reduced and finally locked to the desired frequency (1st local one). Also 1st local frequency is mixed with the received RF signal. Then it passes through CF801, and 1st IF frequency of 10.695MHz is generated. Further, 10.240MHz which is oscillated at X801 and Pins 52,53 of IC801 are mixed at inside of IC801 and filtered at CF802, and 2nd IF 455kHz is output.

<Fig 102>

18.3. Telephone Line Interface Circuit

18.3.1. On Hook (Ringer)

The unit is consequently in an on-hook condition. In the on-hook state (idle), the AC current loop which flows between the telephone line and unit is as follows.

Tip → P01 → L102 → R102 → C102 → Q101 → C101 → R101 → L101 → Ring

In power failure mode

Tip → P01 → C1 → D1 → IC1 → Q1 → D1 → R1 → Ring

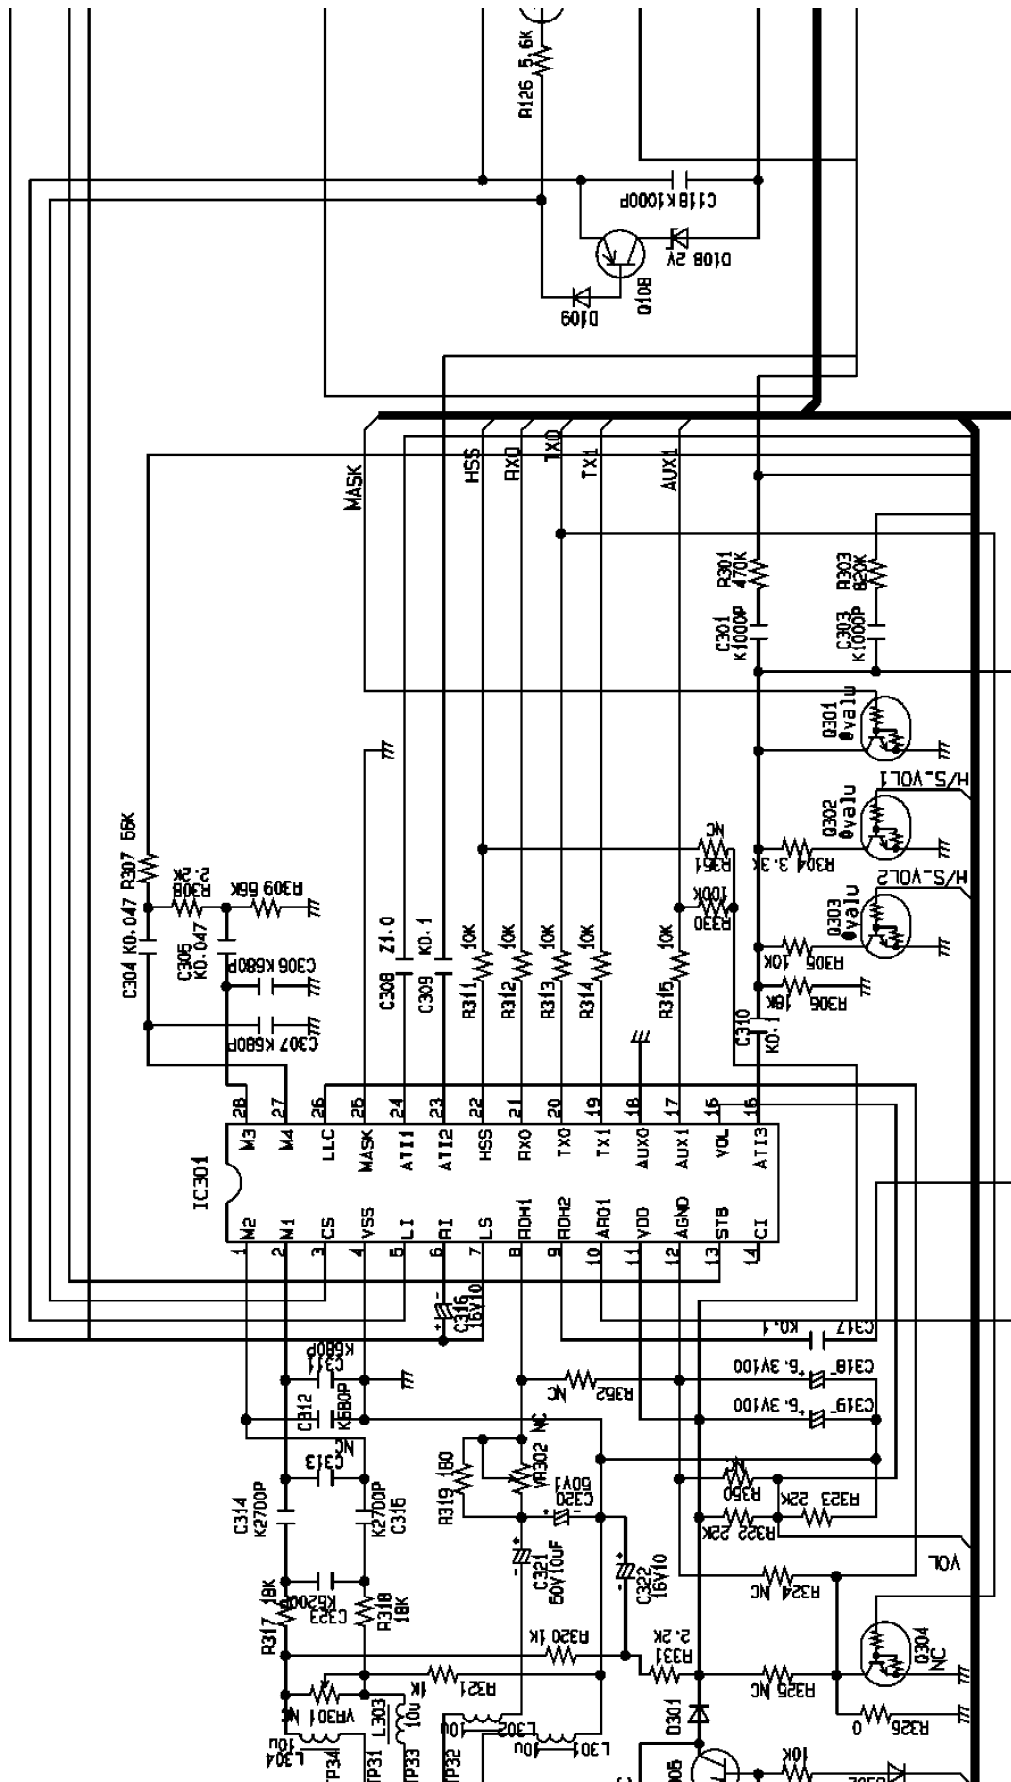

The DC current is blocked by C101, C102: thereby providing an on-hook condition. / The AC interface impedance is over the sum of R101 and R102.

18.3.2. Ringer Circuit

Circuit Diagram

The signal from line goes through the following pass. / tip → P01 → L102 → D102 → Q103 → R128 → IC301 Pin6 / The signal to line goes through the following pass. / IC301 Pin3 → R126 → Q107 → Q103 → D102 → L102 → P01 → tip

47

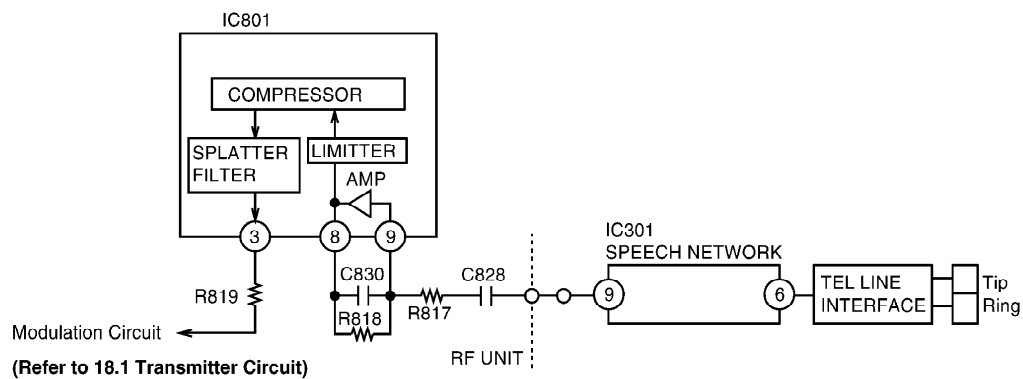

18.4. Receiving Signal Flow from TEL Line To RF

18.4.1. Circuit Operation:

1. The signal input from the TEL LINE goes through IC301(6) → IC301(9) → C317 → VR701 → C707 → R708 → R709 → C828 → R817 and it is input to the signal amplifier of IC801, pin 9. This amplifier is included in a limiter circuit. Signal goes through the compressor and SPLATTER FILTER, it is output in the pin 3 of IC801. Then it goes out to the modulation circuit.

<Fig 105>

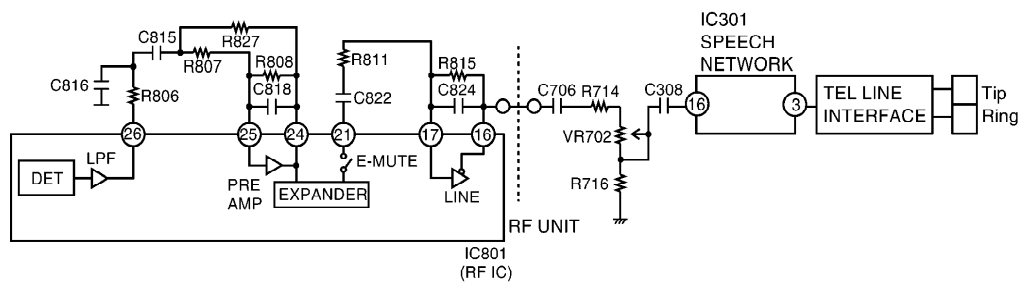

18.5. Receiver Signal Circuit

18.5.1. Circuit Operation:

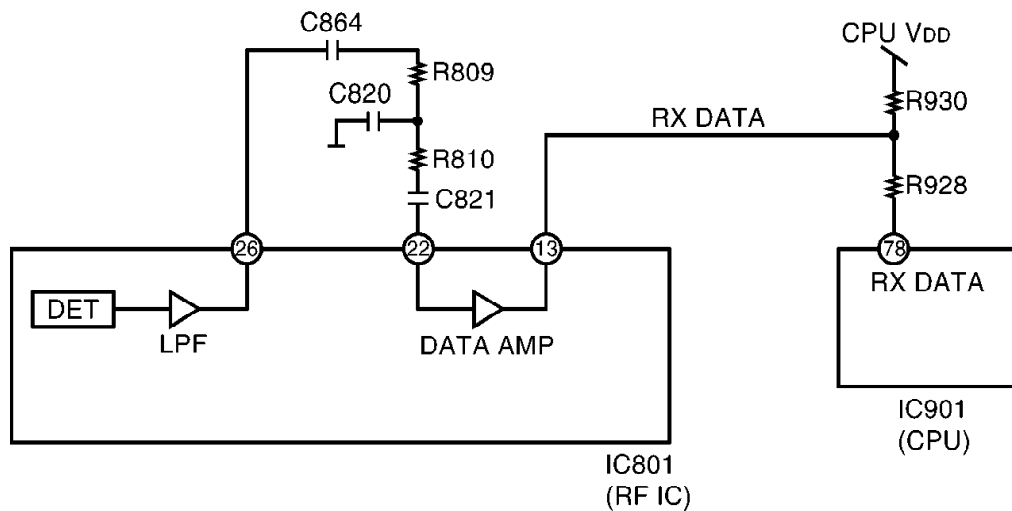

1. The detected signal passes through R806 → C815 → R807 and it is input to the Pre Amplifier inside of IC801; it passes through the expander and goes out from pin 21 of IC801.
2. The signal passes through C822 → R811 and it is input to the Receiver Amplifier of IC801, on pin 17.
3. The signal is output from the amplifier on pin 16 of IC801 and it goes through C706 → R714 → VR702 → C308 → IC301(24) → IC301(3), to the telephone line.

<Fig 106>

18.5.2. Explanation of the Data Reception Circuit of Base Unit

<Fig 107>

In area where the transmission power from the handset is extremely weak, noise is superimposed on the data and the chance of an error can become extremely great upon reception of the data. To help prevent this, the above circuit is used. Demodulated signal is filtered by R809 and C820. The data signal is made square shape by data limiting AMP. RX Data is output from Pin 13 of IC801 and supplied to Pin 78 of IC901 via CN802, R928.

18.6. Initialization Circuit

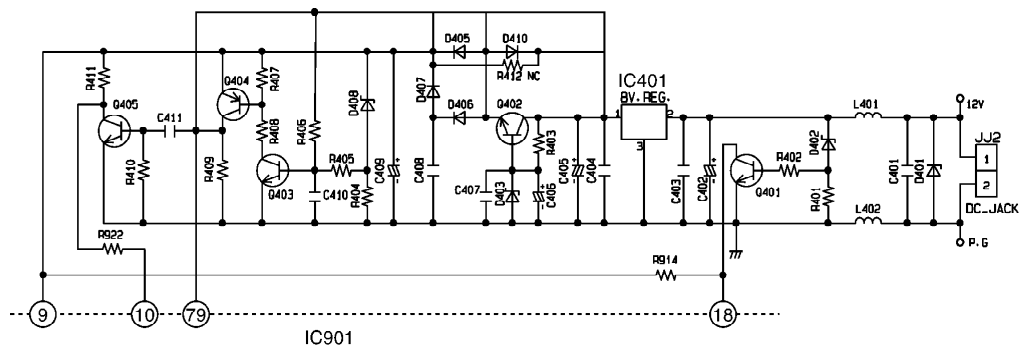

18.6.1. Function:

This circuit is used for initializing the CPU when the AC adaptor is connected.

18.6.2. Circuit Operation:

When the unit is powered ON, the voltage is regulated to 8.0V in IC401 and power is supplied to Q402. Q402 regulate the voltage to 5.4V and power is supplied to the Pin 9 of IC901 (CPU) via D405. Q403 and Q404 are Reset transistors that are output Power Down signal. When input voltage is lower than 4.5V output voltage is Low level. If input voltage is higher than 4.5V output voltage is High level. The output voltage is supplied to Pin 79 of IC901. The output voltage from Q404 make reset pulse by reset circuit that is C411, R410, Q405, R411. The reset pulse is input to Pin 10 of IC901 via R922.

<Fig 108>

<Fig 109>

18.7. Power Supply Circuit

18.7.1. Function:

The power supply from the AC adaptor is supplied to each circuit through 8V regulator.

18.7.2. Circuit Operation:

<The power supply from the AC adaptor>

As soon as IC301 is supplied with auxiliary power at the VDD-pin, the selected signal path of the speech circuit is switched on.

As soon as IC301 is supplied with line current, the external Vdd capacitor will be charged up via the LI-and VDD pin. After the Vdd voltage has reached the operating level of 2V, the line interface circuit and the selected signal path of the speech circuit is switched on. Also, the voltage of CPU is supplied from Q107 → D409.

Collector

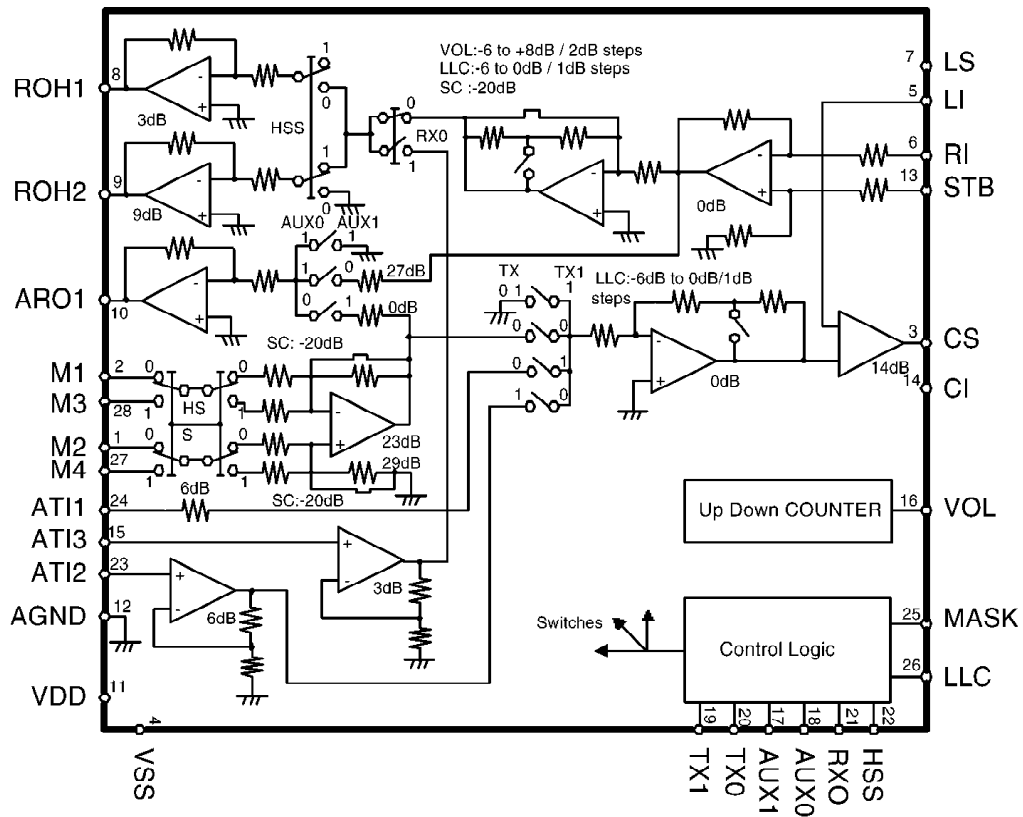

Make/break ratio when dialing with the Handset: 40%: 60% / High/low ratio upon ring signal: 50% : 50% / Therefore, if the low/high ratio is greater than 45% at IC901- 1 (CPU), it is judged as a ring signal.

18.9. Speech Network IC

Speech Network IC (IC301) changes the internal connections and makes the adequate route for voice-signal communications.

18.9.1. Internal Block Diagram and In/Out Port

18.9.2. Signal flow

On each operation mode, input and output ports of IC301 are shown below chart.

Operation Mode		IC port No	IC port No
A	B		
PORTABLE UNIT	TEL LINE	(24) → (3)	(6) → (9)
SP-PHONE	TEL LINE	(27)(28) → (3)	(6) → (9)
PORTABLE UNIT	BASE UNIT	(15) → (8)	(1)(2) → (10)
HANDSET	TEL LINE	(1)(2) → (3)	(6) → (8)

19. BLOCK DIAGRAM (PORTABLE UNIT)

20. CIRCUIT OPERATION (PORTABLE UNIT)

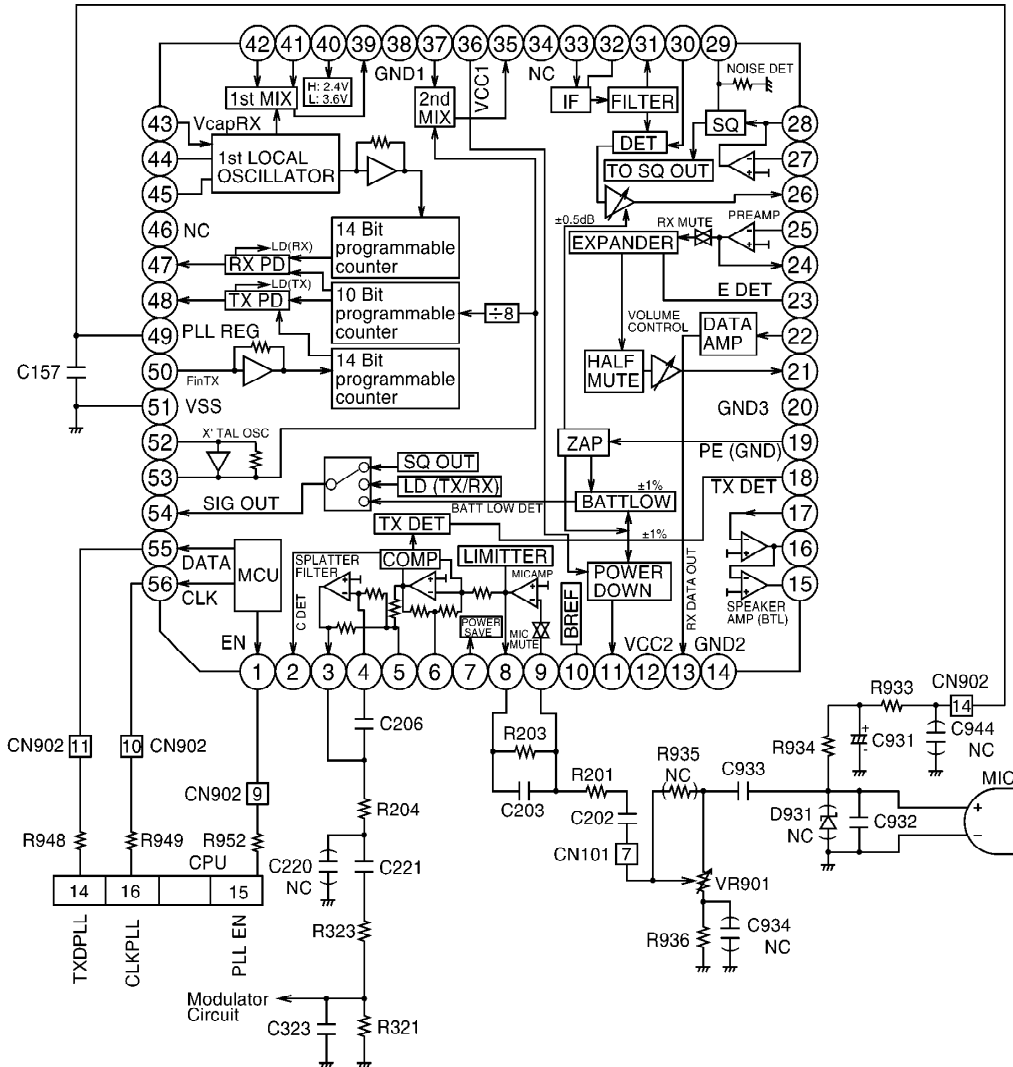

20.1. Receiver RF IF Circuit

20.1.1. Circuit Operation:

The signal of 43 MHz band (43.72 MHz~44.20 MHz) is received at ANT is filtered by DUP101, and is input to Pin 42 of IC101. The RX VCO which oscillates at T201 and IC101 is locked to 1st Local frequency by PLL inside IC101. (PLL is controlled by serial data output from Pin 14 , 15 and 16 of IC901.) An input signal from Pin 42 of IC101 and 1st Local frequency output from RX VCO are mixed inside IC101, pass through CF1, and 1st IF frequency of 10.695 MHz is generated.

is input to the Pin 9 of IC101. Inside it, the signal passes through the MIC AMP and Compressor circuits and SPLATTER FILTER is output to Pin 3. It flows through R204, C221, R323, then is input to modulator circuit.

<Fig 204>

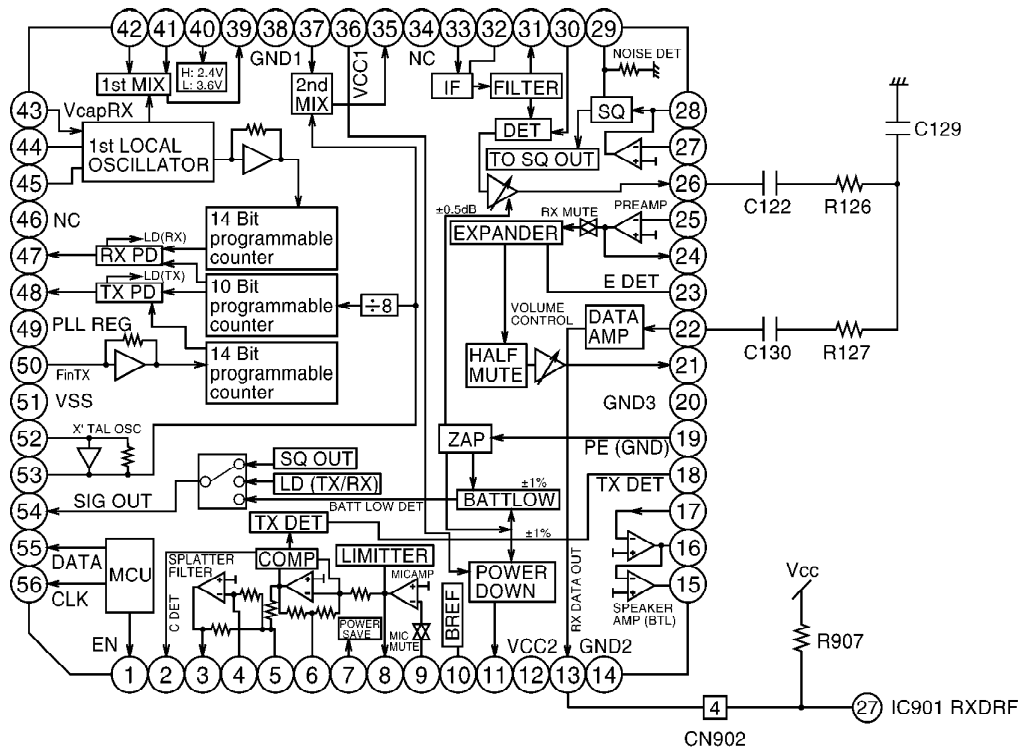

20.5. Receiver Data Circuit

20.5.1. Circuit Operation:

Only the data received are passed through the low pass filter formed by R126 and C129 to be input at pin 22 of IC101, where its wave form is adjusted. The resulting signal is output from Pin 13 and sent to CPU directly.

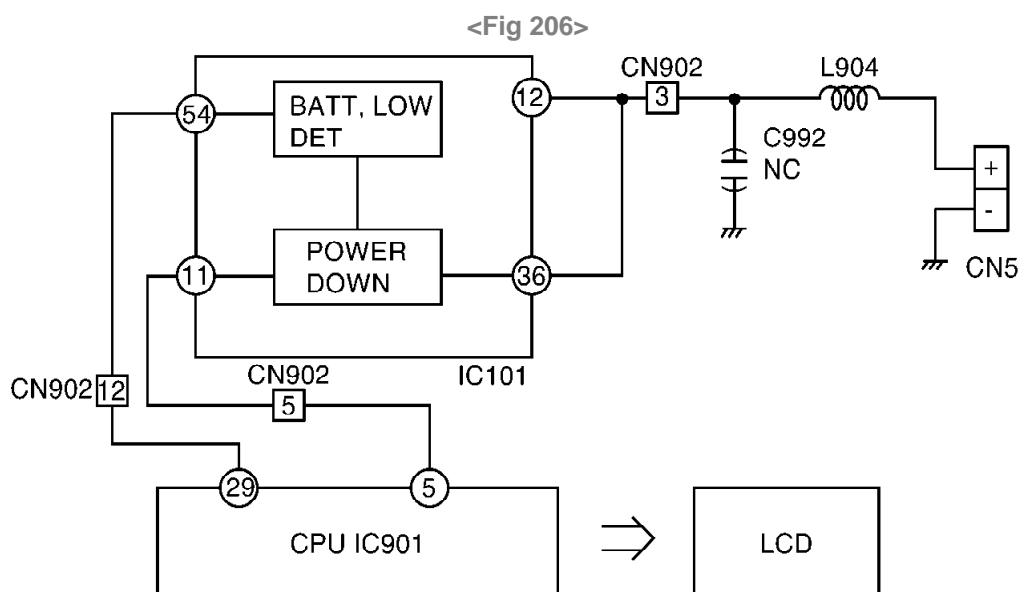

<Fig 205>

20.6. Battery Low Detector Circuit

20.6.1. Circuit Operation:

When the battery voltage goes down less than 3.57 V, this level is detected by the inside of IC101, so its output is sent to Pin 29 of IC901. The CPU detects this level by its Pin 29 and “” “Recharge battery” starts flashing. The IC101 check the level of the battery, if this level is less than 3.3 V, the output of Pin 11 of IC101 becomes low level, then CPU stops working to keep memory.

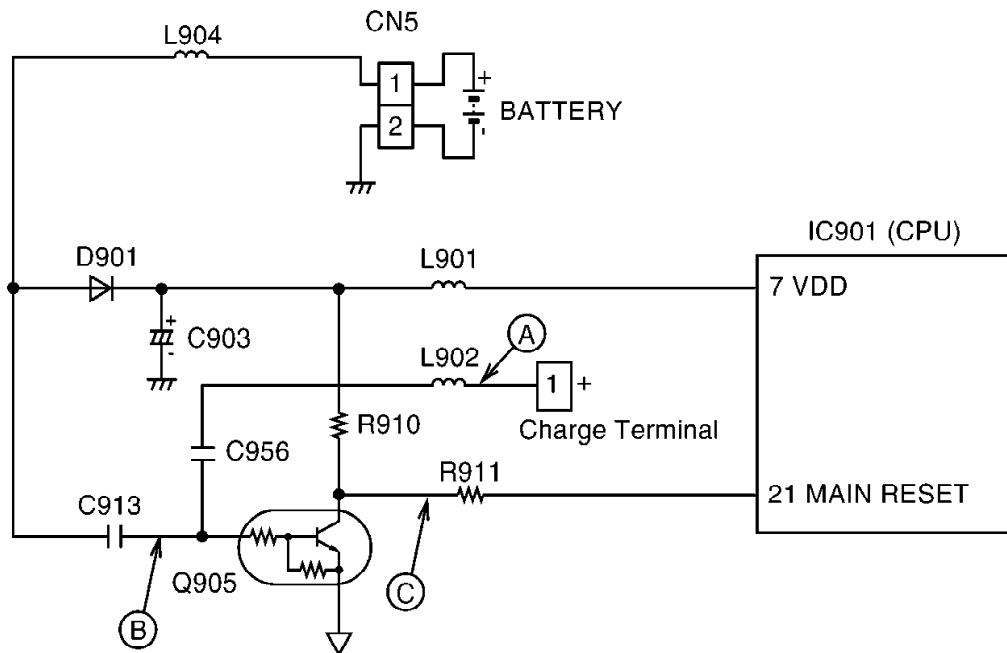

20.7. Reset Circuit Power ON/OFF Circuit

20.7.1. Reset Circuit

When the portable unit is charged, the impulse is sent through L902, C956, Q905 generates the reset signal and it is sent to Pin 21 of CPU via R911.

21.13. Initial Set-up after Replacing EEPROM

<Important>

When EEPROM is replaced, following procedure is required to initialize the contents of the EEPROM.

1. BASE UNIT

- A. Set the BASE UNIT to the test mode. [13.1.1 Test Mode Flow Chart \(Base Unit\)](#)
- B. Turn the BASE UNIT OFF.
- C. Write the ID CODE according to the ID CODE label on the BASE UNIT. [4.2 ID Writing \(For service activity\)](#)
- D. Turn the BASE UNIT OFF.
- E. Make sure the contents of the EEPROM
 - ID CODE: It should be linked with the PORTABLE UNIT.
 - DIAL MODE: TONE
 - FLASH time: 700 msec

2. PORTABLE UNIT

- A. Set the PORTABLE UNIT to the test mode. [15.2 How to set the test mode](#)
- B. Turn the PORTABLE UNIT OFF.
- C. Write the ID CODE according to the ID CODE label on the PORTABLE UNIT. [4.2 ID Writing \(For service activity\)](#)
- D. Turn the PORTABLE UNIT OFF.

E. Make sure the contents of the EEPROM

- ID CODE: It should be linked with the BASE UNIT.

28. REPLACEMENT PARTS LIST

This replacement parts list is KX-TC1075BXB.

1. RTL (Retention Time Limited)

Note:

The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability depends on the type of assembly and the laws governing parts and product retention. At the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by the  mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacture's parts.

3. The S mark indicates service standard parts and may differ from production parts.

4. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms (Ω) K=1000 Ω , M=1000k Ω

All capacitors are in MICRO FARADS (μ F)P= μ μ F

29. FOR SCHEMATIC DIAGRAM

29.1. Base Unit (37 SCHEMATIC DIAGRAM (BASE UNIT))

DC voltage measurements are taken with electronic voltmeter from negative voltage line. (Talk Position)

This schematic diagram may be modified at any time with development of new technology.

Important Safety Notice:

Components identified by ⚠ mark have special characteristics important for safety. When replacing any of these components, use only the manufacturer's specified parts.

29.2. Portable Unit (39 SCHEMATIC DIAGRAM (PORTABLE UNIT))

DC voltage measurements are taken with electronic voltmeter from negative voltage line. (Talk Position)

This schematic diagram may be modified at any time with the development of new technology.

30. CIRCUIT BOARD AND WIRING CONNECTION DIAGRAM (RF UNIT, BASE)

30.1. Component View

30.2. Flow Solder Side View

Note:

Remove the Antenna Wire (Main P.C. Board).

30.3. How to rotate coils and variable resistor for adjustment

1. To insert the small ceramic driver (-) into the hole from the solder side of PCB1 shown below.
holes: T801, T851
2. It is not necessary to unsolder and remove PCB2 from PCB1 by using below holes.

31. SCHEMATIC DIAGRAM (RF UNIT, BASE)

32. CIRCUIT BOARD AND WIRING CONNECTION DIAGRAM (OPERATION BOARD)
